# Team Meeting 29-10-2014

## MINUTES                    16:00

| PARTICIPANTS | Mr. Andreas<br><br>Mario<br>Raphi<br>Luca<br>Thomas |
|---|---|

## Actions to be taken on last sprint

| FEEDBACK<br>MR. ANDREA | Andrea pretty liked our page and the design of it. There are some minor changes he wants us to change and implement. He also mentioned the upcoming event of the v1 release on the 5th of November. Not full functionality is expected. Design issues should be solved by the 3rd of December. |
|---|---|
| 1. | Search for an ad: checkboxes instead of radioboxes because we can check several simultaneously (not XOR)... it will be good if we force that at least one must be checked. |
| 2. | The customer thinks it will be better to have the Geo Auto completion on the search page, too (no wrong input). Like when placing an ad. |
| 3. | keep the city that was entered before in the textbox (even if you go back within menu navigation (breadcrumbs))<br>   -> No need to enter it again and again.<br>   -> Also important for the page when filtering. |
| 4. | Scaling does not really work yet... try get it to work on mobile device. |
| 5. | Room description: a lot of white space on lower right part. Mr. Andrea wants to have the main information as it is to the left of the picture.<br>Further information (smokers, garden, cellar...) should be placed on the lower right part. There should also be the messaging system later on. |
| 6. | Secondary room description could be placed inside <legend> in the room description field. To be checked if this will be nicer to look at. |
| 7. | Mr. Andrea does not really care if we search for a city or leave the search parameter city empty... forcing the user to enter something makes more sense and we will implement it due to visibility and performance issues. |
| 8. | Update SRS |

| ACTIONS | Not fully defined yet. Developers will grab new work as needed. |
|---|---|
| 1. | Working on it: Luca. |
| 2. | Working on it: Mario |
| 3. | Not defined |
| 4. | Not defined |
| 5. | Working on it: Luca |
| 6. | Not defined |
| 7. | Not defined |
| 8. | Working on it: Raphi |

# Actions to be taken on current sprint

| NEXT STEPS<br>    MR. ANDREA | |
| --- | --- |
| 1. | Navigation and visibility is not good enough... only back and home button are means to move forth and back.<br>-> implement breadcrumbs |
| 2. | Black bars for very long images instead of distortion.<br>-> finding a better widget? |
| 3. | Mr. Andrea wants to be able to see where a house lies when clicking on the address. Possibly having an dark overlay with google maps showing the card with the address marked. Open another tab would be good, too considering usability on mobile devices. |
| 4. | Messaging system needs to be implemented next. |
| 5. | After messaging system has been implemented the enquiry function will be next. |
| | |

| ACTIONS | |
| --- | --- |
| 1. | Working on it: Thomas |
| 2. | not defined |
| 3. | not defined |
| 4. | Will be defined on Friday |
| 5. | Will be defined on Friday |
| | |

For the actual work division check Trello.com.

Peace out!!!
